

KEVA PRESENTS CONCENTRACE[®] TRACE MINERAL DROPS **MADE IN USA**

15 REASONS WHY TO CHOOSE CONCENTRACE TRACE MINERAL DROPS

- 1. Natural:** ConcenTrace Trace Mineral Drops has been extracted from Great Salt Lake, Utah (USA) and is the most powerful and natural health supplement for trace minerals in the world. It is extracted directly from a natural source that took thousands of years to create. Over these thousands of years, the minerals have been broken down to their most natural state.
- 2. Balanced:** ConcenTrace has a natural mineral balance similar to healthy body fluids. This is critical because the balance of one trace mineral to another is a web of complicated interactions. If one mineral is too high or too low it can cause an imbalance of another mineral, which can in turn cause an imbalance of another and so on.
- 3. Ionic:** ConcenTrace is ionic, which means that the minerals are in their smallest molecular structure, can conduct electricity, and dry into crystalline form. The body relies on ionic minerals to conduct and generate billions of tiny electrical and other energy impulses every second.
- 4. Pure:** Many other trace mineral products are high in aluminum but ConcenTrace is in precisely the same proportion without synthetically produced compounds or deadly heavy metals and contains no other contaminants. ConcenTrace liquid is Kosher certified.
- 5. Vegan:** ConcenTrace is 100% natural & vegetarian, Vegan certified and contains a balance of minerals.
- 6. Standardized:** ConcenTrace is a standardized product for which strict quality controls are ensured.
- 7. Safe:** As ConcenTrace contains a natural balance of trace elements that are lacking in the diet, it can be taken for extended periods of time without adverse reactions.
- 8. Rich in the right stuff:** ConcenTrace is very low in sodium, yet rich in magnesium, Calcium, boron, selenium, lithium, chloride and more than 70 total trace minerals.
- 9. Highly bio-available:** Only ionic minerals are capable of passing freely through semi permeable membrane, such as cell or intestinal membrane. Dr. Paris Kidd states that minerals should be ionic to be readily absorbed through transfer in the small intestine.
- 10. Body-fluid balanced:** Within the blood stream, lymphatic fluid, cells and extracellular fluid, minerals and trace minerals can be found completely dissociated into solution. Minerals in this form are called electrolyte or ionic.
- 11. Easily dissolved:** In ConcenTrace, the minerals are maintained in true electrolyte or ionic solution. This form allows for maximum absorption.
- 12. High in mineral to water ratio:** With ConcenTrace you are paying for a very high concentration of minerals; not water, fillers or anything else that you don't want.
- 13. Convenient / Small daily dose:** ConcenTrace is preserved in plastic bottles which are small in size. Thus it requires less space and hence a better solution to storage problems. The bottle packing allows no breakage. Moreover it is light in weight being an additional feature for convenient handling.
- 14. Long shelf life:** ConcenTrace will not lose its potency. In its concentrated form, the ConcenTrace minerals will be good indefinitely without any loss of potency or potential for microbial growth.
- 15. Value Based:** ConcenTrace is based on the principle that nutritional supplements should get results and that customers feel an improvement in their health. Not a single bottle of ConcenTrace leaves their manufacturing facility unless they can confidently back it up with the guarantee of "Feel the Difference." The guarantee isn't just a guarantee; it's a peace of mind.
